Intermittent leave under the Family and Medical Leave Act (FMLA) occurs when leave is not taken in a continuous block of time for a qualifying reason. For employers, managing intermittent leave can prove challenging and costly due to the sporadic and disruptive nature of these absences. Having a solid leave administration program in place is important. It can help reduce risks, save money and minimize disruptions in the workplace.

**Employer challenges**

Employers say that their biggest challenge in managing leaves of absence is training managers and supervisors on the FMLA.¹ Some of the most difficult activities employers face are:

- Having a decentralized approach and nonstandard policies
- Getting supervisors to grasp the legal implications of mismanagement
- Lack of training/knowledge of leave laws
- Leave management staffing issues
- Lack of technology for tracking and administration

Intermittent FMLA leave can also be a target of abuse and can have a significant impact on company morale and productivity. Employers should have a clear, FMLA-compliant strategy in place to help combat intermittent leave abuse.³ Signs of FMLA abuse to look for may include:

- High degree of FMLA leave usage on Fridays, Mondays and around holidays
- Employees who are unable to use their vacation or personal days take family medical leave for those same days
- Coworkers informing employers about employee FMLA abuse in the workplace

---

Unplanned absence can have a huge impact on an employer’s business - it can cost a 1,000-employee company $4 million each year.²

**Intermittent leave today**

Employers are growing more confident in understanding the FMLA and incorporating it into their business processes.¹ Yet, they still struggle to administer intermittent leave.¹ Consider this:

- 33% of employers have reported an increase in intermittent leave²
- 45% of employers, almost half, have reported difficulty managing or tracking intermittent leave²

---

Together, all the way.®
Employer solutions

Administration of intermittent family medical leave remains a challenge. However, there are ways employers can reduce fraud and abuse, while managing the process more efficiently:

1. Develop a sound leave of absence policy with established call-out procedures. Define the company’s processes and policies to ensure consistent absence management, while making sure the policy:
   - Complies with the FMLA and Americans with Disabilities Act (ADA)
   - Prevents and reduces costly absences
   - Optimizes health, productivity and savings

2. Create solid administrative practices for confirming eligibility, tracking use and enforcing call-out procedures. Proper tracking helps employers give the right amount of family medical leave for their employees and can also help find patterns or trends that could suggest abuse.

3. Make sure that both supervisors and employees understand their roles and responsibilities. Supervisors should know how to designate leave time properly. Employees should know how to correctly submit a leave request.

4. Use medical certifications and request re-certifications to help find out whether family medical leave should be extended. The FMLA provides employers with the option of requiring medical certifications, which may be the best tool for helping curb abuse.

5. Integrate FMLA management with existing health management programs such as employee assistance and wellness programs, disease management services and health coaching. Employers can look at the most common FMLA claims and offer programs that address these needs. Integration can help employers reduce short-term disability incidence, duration and costs.

6. Consider outsourcing FMLA administration. Advantages can include:
   - More accurate and consistent tracking, reporting and correspondence
   - Reduced costs with more efficient and automated administration
   - Increased employee productivity and morale through fair and consistent policy applications
   - Compliance with state and federal FMLA laws

Effective leave administration is within reach

Intermittent family medical leave can be difficult, complex and costly. And abuse will likely still be a challenge. However, employers can make the process smoother with thorough planning and consistent practices.

Remember – it all starts with an established policy. And it should include solid tracking and enforcement, well-communicated roles and responsibilities, and an open dialogue. If it seems too daunting, get help. Outsourcing is always an option to consider. While it’s not easy, it is possible to run an efficient and effective leave administration program. And it’s worth it. If done correctly, it can help employees when they need it most – while minimizing disruption, misuse and expense.
